ABSTRACT OF THE DISCLOSURE

A work support method is adapted to a work support apparatus having a skill information storage section to store skill information of workers, a

5   work item information storage section to store work item information with respect to a work, and a work information storage section to store worker information of each work item with respect to the work.   The work support method extracts a worker

10   corresponding to each work item by referring to the skill information storage section and storing the extracted worker in the work information storage section, with respect to each work item stored in the work item information storage section, in

15   response to a work order.
